PRS Odor Control

PRS Odor Control

Where to Use

PRS Odor Control is a biologically based odor treatment engineered specifically for many of the restoration industries' toughest challenges including: protein fires, post-mortems and trauma, skunk, and urine. It digests odors and moderate soil loads, reducing them to water and carbon dioxide using incredibly concentrated levels of spore strains that recognize and digest the organic odors at their source. This product contains no fragrance or deodorizers, which could trigger hypersensitivities. PRS Odor Control is designed to eliminate odors and moderate soil levels only. In situations where heavy soil loads are present, such as trauma and multiple pet dwellings, PRS Water Damage PreClean is recommended to digest the soil load, while PRS Odor Control may digest odors only.

Benefits

- Non Toxic
- Biologically Based
- No Hazardous Ingredients
- Concentrated

Directions for Use

Shake well before use. Do not use below 50°F.

PRS Odor Control must have wet contact with all odorous surfaces long enough to penetrate and digest the odor. Wet contact time will vary with the porosity of the surface and the nature of the odor.

Apply PRS Odor Control with a wet ULV fog (do not thermal fog) or a sprayer application to accomplish the above. An electromagnetic sprayer or 'magnet sprayer' may also be used, especially following protein fires.

Heavy Duty: Dilute 3 parts water to 1 part PRS Odor Control.

Medium Duty: Dilute 10 parts water to 1 part PRS Odor Control

Once surfaces are wet, the concentration may be increased accordingly. Re-wet with diluted product as required, or until odor is no longer present. Removes most odors quickly.

Properties	
Color	Hazy Amber Liquid
Fragrance	Mild
VOC's % (EPA Method 24)	0%
pH (concentrated)	8.0 (+/-0.5)
Phosphate Free	Yes

Available Packages	Package Code	
4x1 gallon (4x3.8 Litres) case	# 11905027
